

Biology I Exam
Name: Eleanor Vance / Date: Oct 12, 2023 / Period: 3
Topic: Cell Structure & Function

1. Define the primary function of mitochondria.
→ Mitochondria are known as the "powerhouse" of the cell; they are the main site of cellular respiration, where glucose is broken down to produce ATP (adenosine triphosphate), the energy currency of the cell. They are characterized by a double membrane system.

2. Draw and label a plant cell showing key organelles (see diagram above).
3. Compare three key differences between plant and animal cells.
- (a) Plant cells possess a cell wall and chloroplasts; animal cells do not.
- (b) Plant cells have a large central vacuole; animal cells have small, temporary vacuoles (if any).
- (c) Plant cells use chloroplasts for photosynthesis...
