⑤

Chemical structure of

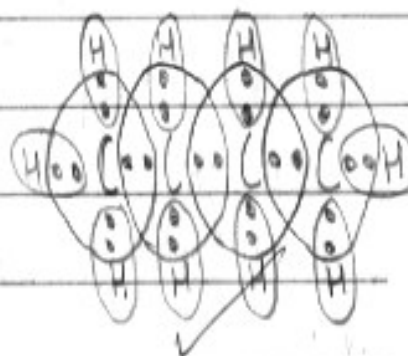

Chemical structure of

①

Chemical structure of a steroid molecule, showing the characteristic four-ring nucleus and various functional groups.

2FL - 1

⑥ Butane $[C_4H_{10}]$

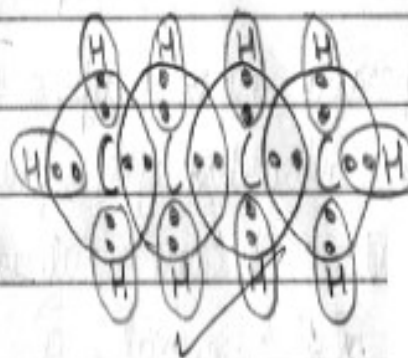

③ ~~Criteria~~ Criteria used by Mendeleev for creating his periodic table is =

- ① He arranged the elements in order of increasing atomic masses.
- ② He placed the elements with similar properties in same group. In order to find similarity he ~~he~~ compared oxides and hydrides of different elements.

* Isotopes were not able to find position in Mendeleev's periodic table^{as} elements were arranged in order of increasing atomic masses and isotopes have same atomic number but different atomic

⑥ Butane $[C_4H_{10}]$

③ ~~Criteria~~ Criteria used by Mendeleev for creating his periodic table is =

- ① He arranged the elements in order of increasing atomic masses.
- ② He placed the elements with similar properties in same group. In order to find similarity he ~~to~~ compared oxides and hydrides of different elements.

* Isotopes were not able to find position in Mendeleev's periodic table^{as} elements were arranged in order of increasing atomic masses and isotopes have same atomic number but different atomic
